

I'll first check whether Bullhorn has structured fields for clearance and relocation preference, then search résumé text and fields for both concepts. I'll report completeness explicitly rather than treating résumé keyword hits as exhaustive.

Bullhorn has structured fields for relocation (`willRelocate` , `desiredLocations`) but I don't see a clearly labeled structured clearance field in the candidate schema. Clearance appears to require résumé/notes/skill text search, so completeness will be limited by résumé parsing and whether recruiters entered clearance consistently.

A stricter search for candidates with both clearance terms and structured DC-area desired locations returned 0. I'm checking résumé-text phrasing next, because the structured `desiredLocations` field appears mostly blank or not DC-specific.

Thought for 3m 13s >

I could **not reliably identify any candidate who meets both requirements** with exact evidence for:

- 1. **Active security clearance**, and
- 2. **Willingness to relocate specifically to the DC area.**

Result

Confirmed matches: 0

Why

Bullhorn's candidate schema does include relocation-related fields:

Field	What it captures
<code>willRelocate</code>	General yes/no relocation flag
<code>desiredLocations</code>	Target relocation locations, when populated

But I did **not** find a clearly labeled structured clearance field in the candidate schema. Clearance has to be inferred from résumé text, `skillSet` , occupation/company text, or other unstructured fields, which means it is **not reliably complete**.

Data completeness found

Check	Result
Active candidates searched	492,558
Active candidates with <code>willRelocate:true</code>	30,152
Active candidates with clearance-related résumé/skill terms	6,069
Active candidates with clearance terms and <code>willRelocate:true</code>	360
Active candidates with DC-area <code>desiredLocations</code> only	3
Active candidates with both <code>willRelocate:true</code> and DC-area <code>desiredLocations</code>	0
Active candidates with clearance terms and DC-area <code>desiredLocations</code>	0

Important limitation

The 360 candidates with clearance-related terms and `willRelocate:true` are **not enough to qualify** for your ask, because `willRelocate:true` only proves general relocation openness. It does **not** prove they are open to relocating to **Washington, DC / Northern Virginia / Maryland / DC metro**.

I also did **not** treat candidates already living in DC, Maryland, or Virginia as “open to relocating to DC,” because current address is not relocation preference evidence.
