

Find active candidates strong in Go (Golang) microservices with real Kafka experience - weigh what's in their résumés, not just the skill tags, and watch for false positives where "Go" is just a buzzword. For your top 5: Bullhorn deep link, current title/employer, estimated total years, the exact résumé lines proving Go + Kafka, and whether their most recent relevant role is within the last 2 years.

I'll search Bullhorn for active candidates using résumé text plus skills, then verify the shortlist by reading full résumés rather than trusting tags. I'll prioritize Golang/Go as a programming language, Kafka used in delivery context, and microservices architecture evidence.

 Called tool

The first Bullhorn search rejected one field name, so I'm narrowing the returned fields and keeping the search logic focused on résumé evidence.

Looked for available tools 

 Called tool

I found many Kafka/microservices profiles, but most are Java/Python only. I'm now isolating true Go/Golang evidence and excluding cases where "go" appears only as generic wording or a tag without project context.

Thought for 2m 39s >

Below are the top 5 I would shortlist **after weighing résumé content over tags**. I excluded obvious weak/false positives where "Go" only appeared as noise, "Go Live," "Go basic," or in a massive keyword dump without role evidence.

Rank	Candidate	Current title / employer	Est. total years	Most recent relevant role within last 2 years?	Assessment
1	Scott Crawford ↗	Staff Software Engineer, Google	13+	Yes. Google, present	Strongest match. Real Go, Kafka, microservices, and scale in current role.
2	Yaswanth Mandapati ↗	Software Engineer, Ally Financial	6+	Yes. Ally, Dec 2023 to present	Strong Kafka/microservices. Go is real but strongest Go role is 2019 to 2022.
3	Gordon Towne ↗	Staff Software Engineer, Spotify	10+	Yes. Spotify, Mar 2024 to present	Excellent Kafka/microservices. Go appears in skills, but role bullets emphasize Java/Scala.
4	Matthew Cai ↗	Senior Software Engineer, HubSpot	10+	Yes. HubSpot, 2024 to present	Strong backend/platform profile with stated deep Go. Kafka appears in skills, not strongly in role bullets.
5	Vijay Reddy ↗	Senior Java Full Stack Developer Lead, Verizon	10+	Yes. Verizon, Nov 2021 to present	Very strong Kafka/microservices. Go appears as a listed language only, so treat as lower-confidence Go.

Résumé proof lines

1. Scott Crawford

Go proof

“Deep hands-on experience with Go, Java, Python across GDPR/CCPA compliance pipelines, payment processing, real-time ETL, and machine learning infrastructure.”

“Engineered multi-channel management system for creators using Go microservices, gRPC, and PostgreSQL read replicas, handling 50K+ QPS at peak with p99 latency under 200ms through load balancing and Kubernetes autoscaling.”

Kafka proof

“Designed unified account architecture migration using Java, Spring Boot, Spanner, and event-driven Kafka streams, migrating 2B+ users with zero downtime...”

“Developed petabyte-scale data pipelines combining Apache Kafka, Apache Spark, Cloud Dataflow, and BigQuery for real-time ETL and batch processing...”

Why he ranks #1: This is not a tag match. His current Google role has both **Go microservices** and **Kafka streams/data pipelines** in delivery context.

2. Yaswanth Mandapati

Go proof

“Expert in Java, Go, and Python with a focus on building resilient, event-driven architectures handling 500K+ daily transactions.”

“Developed high-performance payment processing engines in Go and Java, facilitating \$1.3M+ in monthly transaction volume with full PCI-DSS compliance.”

Kafka proof

“Optimized event-driven audit trails via Apache Kafka, maintaining sub-200ms end-to-end latency for 500K+ daily transactions.”

“Engineered a high-throughput streaming data pipeline using Kafka Streams to detect fraudulent patterns in financial transactions, achieving a processing capacity of 10K+ events per second.”

Why he ranks #2: Real Kafka in the current Ally role and real Go in a prior engineering role. Strong overall, but the clearest Go delivery line is older than 2 years.

3. Gordon Towne

Go proof

“Programming Languages: Python, Go, JavaScript, TypeScript, Java, Rust, Scala”

Kafka proof

“Owned batch and streaming data pipelines using Kafka, Scio/Spark, and GCP, processing billions of events daily across 40K+ topics for agentic recommendations.”

“Designed and scaled Java/Scala/Kafka microservices on GCP for real-time personalization event processing, powering Discover Weekly and Daily Mix...”

Why he ranks #3: Kafka and microservices evidence is excellent and current. Go is only proven in the skills section, not in role bullets, so I would validate Go depth in screening.

4. Matthew Cai

Go proof

“Deep expertise in Go, Java, and Python with a consistent track record of delivering high-availability infrastructure at PayPal, Nasdaq, and HubSpot.”

“Programming Languages: Python, Go, JavaScript, TypeScript, Java, Swift, Rust, Scala”

Kafka proof

“Technologies: AWS, Azure, Google Cloud, Microservices Architecture, Serverless, Docker, Kubernetes, Terraform, Event-Driven Architecture, Message Queues (Kafka, RabbitMQ)”

Why he ranks #4: Strong platform/backend résumé and “deep expertise in Go” is explicit, but Kafka is not tied to a specific role bullet as directly as Scott, Yaswanth, or Gordon.

5. Vijay Reddy

Go proof

“Languages: Java 8/11/17/21, JavaScript, TypeScript, Python, SQL, Go.”

Kafka proof

“Architected an event-driven billing platform using Java 17, Spring Boot, and Kafka, processing 15M+ daily transactions with 99.97% uptime and zero data loss.”

“Built a high-scale shipment platform using CQRS and Kafka, handling 300K+ concurrent users with sub-200ms latency.”

Why he ranks #5: Very strong Kafka/microservices résumé, but Go appears only as a listed language. This is a lower-confidence Go match and should be screened carefully.

Notable false positives / lower-confidence profiles

Filip Mariani looked promising from Bullhorn skill data because the profile had “Go (Golang), gRPC, Microservices Architecture, Kafka,” but the accessible résumé text only showed Kafka/microservices and did **not** provide a clear Go résumé line. I would not put him in the top 5 without opening the latest PDF in Bullhorn.

Ryan Barril has Go and Kafka in the skills section and strong microservices experience, but the work-history bullets do not prove hands-on Go or Kafka delivery.

Karthik Gunturi explicitly says “Go (basic),” so I would treat that as a false positive for a strong Go search.
