

I'll check opportunities with deleted records included, then soft-deleted open jobs, and pull three example open jobs using the same open-job definition.

 Called tool
▼

I found 43 total opportunities when deleted records are included. I'm separating only the statuses that count as "open" and verifying the soft-deleted job total.

Thought for 57s >

Open opportunities including deleted ones: **24**

Open jobs that have been soft-deleted: **16**

3 open jobs:

1. **34849** . Administrative Assistant . Accepting Candidates . STS-STSI
2. **34642** . AI Developer . Hold - Covered . MYT-Ottawa
3. **34641** . MLOps Engineer – Machine Learning Operations & AI Infrastructure . Hold - Covered . MYT-Ottawa

Definition used for **open jobs**: `isOpen = true` and `status != Archive` . For the earlier 398 count, I also excluded soft-deleted jobs with `isDeleted = false` . For the soft-deleted count above, I used `isOpen = true` and `isDeleted = true` .
