

find me active candidates who are strong Java backend engineers with hands-on AWS and Kubernetes experience, and bonus points for Spring Boot. Don't rely only on the structured skills fields — also weigh what's actually written in their résumés.

For your top 5, give me:

Name (rendered as the Bullhorn deep link)

Current / most-recent title and employer

A rough estimate of total years of experience, inferred from

Show more ▾

I'll pull a shortlist from Bullhorn using both structured skills and résumé text, then open candidate records and résumés to verify recency, work-history dates, and exact résumé mentions.

Looked for available tools ▾

The first pass was blocked before execution because I had not loaded the Bullhorn tool schema in this chat. I've loaded the candidate search tools now and will rerun using the connector's supported candidate search syntax.

{≡} Called tool

The search is finding strong résumé matches, but the Bullhorn "status:Active" filter appears not to map cleanly to the live statuses in this database. I'm excluding archived records and prioritizing active-looking statuses like "Online Applicant" while verifying against résumé text.

Thought for 3m 52s >

I interpreted "active candidates" as **non-archived, active-looking Bullhorn records**. The top 5 below all showed **Online Applicant** status and were verified against résumé text, not just the structured skills list.

Rank	Candidate	Current / most-recent title & employer	Est. total experience	Why they fit, from résumé text	AWS/Kubernetes dated?
1	Rishab Dogra ↗	Java Full Stack Developer, Nike	~8 years	Current Nike role says he designed Spring Boot/Spring Cloud microservices with AWS cloud services, containerized apps with Docker, and deployed on Kubernetes/AWS environments.	No. Current role, Dec 2024 to present.
2	Sumanth Reddy ↗	Software Engineer, Amazon	~6 to 7 years	Current Amazon role says he built Java Spring Boot backend microservices, AWS Lambda/SQS workflows, Dockerized apps, and deployed services on Kubernetes EKS.	No. Current role, Sept 2024 to present.
3	Grace Taylor ↗	Staff Java Engineer, Sleep Number	~15 years	Strong Java backend résumé. Current role includes Java 17, Spring Boot, AWS Lambda, DynamoDB, Kafka, and migration of monoliths to AWS ECS. Kubernetes is explicit in prior Centegix role.	Partial flag. AWS is current, Kubernetes appears in 2019 to 2022 role and skills section.
4	Selvakumar Sellamuthu ↗	Lead Software Engineer, Appian Corporation	~19 to 20 years	Current Appian work says he is migrating Appian solutions from AWS EC2 to AWS EKS, with Java, AWS, Kubernetes, and Terraform. Strong cloud-native	No. Current role, Jun 2023 to present.

Rank	Candidate	Current / most-recent title & employer	Est. total experience	Why they fit, from résumé text	AWS/Kubernetes dated?
				backend/platform profile.	
5	Mohammed Sheikh ↗	Mobile and Web Developer, freelancer / prior Software Engineer II, PDI Technologies	~5 to 6 years	Résumé says Java Spring Boot backend services, AWS cloud services, Kubernetes/OpenLens deployment monitoring, Docker/Kubernetes automation, and event-driven microservices with Kafka.	Mild flag. AWS appears current in freelance stack, but hands-on Kubernetes is clearest in 2022 to Jan 2025 roles.

#1 verification, exact résumé lines for AWS and Kubernetes

From **Rishab Dogra's** résumé:

Designed and implemented microservices with Spring Boot, Spring Cloud, and AWS Cloud services for scalability and high availability.

Containerized applications using Docker and deployed on Kubernetes, PCF, and AWS environments.

Utilized AWS services such as EC2, S3, Lambda, DynamoDB, SNS, SQS, and Kinesis for cloud-native application development.

Environment : Java 11/17/21, J2EE, Spring 5.0, Spring boot, Spring IOC, Spring MVC, Spring Batch, Hibernate 4, Micro service, JMS, JSF, CVS, REST, REST API, log4j, JUnit, HTML5, CSS3, AKS, Java Script, JQuery, Angular JS, JSP, SOAP, Jenkins, PCF, CI/CD, Mongo DB, AWS, Java Script, Kafka, Tomcat, Kubernetes, Docker.
