

I'll pull placements from Bullhorn and filter for records added during May 2026, since that is the most recent completed May.

▼

The direct Bullhorn placement pull was blocked at the connector layer, so I'm checking the available Bullhorn actions and will use the supported route instead.

Looked for available tools ▼

Looked for available tools ▼

The supported call works with limited fields. I've confirmed placements include `dateAdded`, so I'm paging through IDs and added dates only to isolate May records.

Thought for 3m 45s >

I could only retrieve the first page from Bullhorn before the connector blocked pagination. From that accessible page, I found **9 placement records added in May 2026**:

Placement ID	Date Added	Status
2804	May 27, 2026, 6:00 PM	Approved
2803	May 27, 2026, 3:51 PM	Approved
2802	May 27, 2026, 2:52 PM	Submitted
2801	May 25, 2026, 2:37 PM	Approved
2799	May 21, 2026, 9:46 AM	Approved
2798	May 21, 2026, 9:32 AM	Approved
2797	May 20, 2026, 9:51 AM	Approved
2795	May 15, 2026, 3:44 PM	Approved
2794	May 15, 2026, 3:07 PM	Approved

Partial total confirmed: 9 May placement records.

I'm not able to verify whether there are additional May records before May 15 because Bullhorn pagination calls after the first page were blocked by the connector.
