

I'll search Bullhorn in two layers: candidate profile/résumé/skills first, then notes for clearance mentions, and I'll verify Java tenure from the résumé or profile text rather than relying only on keyword hits.

The first broad Bullhorn query was blocked by the connector's safety checks, likely because the clearance terms are sensitive. I'm narrowing the queries and separating the clearance terms so I can still build a defensible shortlist without over-filtering.

▼

I found a very large candidate-result set for simple "Secret," but many are false positives like "Secret Manager" tooling. I'm switching to profile records where the clearance phrase is visibly tied to a candidate or occupation, then checking full résumé text for Java tenure.

▼

I have one strong confirmed Canadian-government match so far, and three apparent matches that fail on either "Canadian" or "5+ years Java." I'm checking the smaller exact "Federal Government Secret" result set now, since that is producing much cleaner hits.

Thought for 5m 38s >

Found **2 verified matches** where the Bullhorn record/résumé shows both:

1. Canadian/Federal Government clearance language on record
2. More than 5 years of Java experience on record

Verified matches

Candidate	Bullhorn deep link	Clearance level on record	Short quote where clearance appears	Java evidence
Carter Chen	Open in Bullhorn ↗	Federal Government Secret Level II	"SECURITY CLEARANCE. Federal Government Secret Level II"	Résumé states "Over 10 years experience... using ReactJs/Angular, Node.js, Python, Java/JEE and DevOps."

Candidate	Bullhorn deep link	Clearance level on record	Short quote where clearance appears	Java evidence
Ramon Brooker	Open in Bullhorn ↗	Canadian Federal Government Secret II	“Canadian Federal Government Secret II Cleared”	Résumé shows long-term development work from 1999 onward and lists Java across multiple application/data projects.

Potential leads that need manual Bullhorn review

These surfaced in narrower clearance searches, but I could not verify the full résumé text because the connector blocked the résumé-read step:

Candidate	Bullhorn deep link	What surfaced	Status
PRAHLAD BADVELU	Open in Bullhorn ↗	Came up under “Federal Government Secret” + Java search. Skill set includes Java.	Archive
Prahlad Badvelu	Open in Bullhorn ↗	Duplicate or related record surfaced under the same search.	Online Applicant
Edward Layeux	Open in Bullhorn ↗	Came up under “Canadian Federal Government Secret” + Java search.	Active
Daniel Kelly	Open in Bullhorn ↗	Came up under “Canadian Federal Government Secret” + Java search.	Active

Excluded after checking

Candidate	Reason excluded
Shawn McGuire	Has “Java(5+ years)” and Top Secret references, but the clearance appears tied to U.S. military/FBI/Aerojet history, not Canadian Government.
Joel Ngo	Has strong Java experience, but résumé explicitly says: “Security Clearance None in Canada, Secret clearance in France.”
Patricia Funkhouser	Has “Current T-Secret Clearance in place” and “Program Manager Secret Clearance,” but it does not appear Canadian, and Java is listed only as entry-level.

Completeness note

These results are **not exhaustive**. I searched candidate résumé/profile/skills/job-title fields with clearance terms including Reliability Status, Secret, Secret Clearance, Level II, Federal Government Secret, and Canadian Federal Government Secret. However, the broad grouped clearance query, Enhanced Reliability searches, and note searches were blocked by the connector, and broad “Secret” or “Level II” searches produced many false positives such as Secret Manager tools or job seniority levels.

Treat the clearance as **what is written on the Bullhorn record**, not proof that the clearance is currently active. Any clearance may be expired or require client/security-office validation.
