

how many open job orders do we currently have right now? Just give me the number

{≡} Called tool

513

What internal departments hold most of those open jobs?

I'll group the current open Job Orders by the department-style field in Bullhorn and return the largest buckets only.

{≡} Called tool

The job order search caps results at 100 per call, so I'm paging through the 513 open records and grouping them from the returned department fields.

Looked for available tools ▼

{≡} Called tool

Most records have the department/category field blank, so I'm checking the populated departments by category count and separating "uncategorized" from actual department values.

Thought for 3m 13s >

Most are **uncategorized / no internal department set: ~429 of 513.**

Top populated departments:

1. **Engineering:** 32
2. **IT/Software Development:** 19
3. **Accounting:** 6
4. **Architecture/Design:** 5
5. **Customer Service:** 4

6. Manufacturing: 4

So, among jobs with a department populated, **Engineering holds the most open jobs.**
