

build me a 2026 year-to-date staffing scorecard broken down by Internal Department (e.g. MYT-Ottawa, STS-STSI, MYT-Chicago, MYT-Clover, MYT-Ohio).
For each department, show:
1. Placements made so far in 2026, split by employment type (Contract, Contract to Hire, Direct Hire).
2. The number of jobs currently open.
3. Active sales opportunities in the pipeline (anything not Closed-Won, Closed-Lost, or Converted).
Then add a "demand vs. delivery" column = open jobs divided by
Show more

I'll pull this from Bullhorn using 2026 year-to-date as January 1 through today, June 20, 2026. I'll first confirm the relevant fields for placements, jobs, and opportunities, then aggregate by internal department and flag any caps.

Called tool

I found the placement department field: `correlatedCustomText1`, labeled "Internal Department." I'm checking the matching department/status fields on jobs and opportunities before counting, so the rollup stays consistent across objects.

Looked for available tools

Looked for available tools

Looked for available tools

Called tool

Some Bullhorn list/query calls are being blocked by the connector safety layer, so I'm switching to the search endpoints and validating each object separately. This may affect completeness, and I'll call that out clearly in the caveats.

Thought for 3m 42s

I could not complete the full scorecard because Bullhorn allowed the job search reads, but blocked the placement and opportunity list/query reads needed for the YTD placement and active pipeline counts.

Rank	Internal Department	2026 Placements: Contract	2026 Placements: Contract to Hire	2026 Placements: Direct Hire	Total 2026 Placements	Jobs Currently Open	Active Sales Opportunities	Demand vs. Delivery	Caveat
1	STS-STSI	Not available	Not available	Not available	Not available	242	Not available	Not available	Placement a opportunity reads blocke Job count us isOpen:1 Al NOT status:Arch
2	MYT-Ottawa	Not available	Not available	Not available	Not available	106	Not available	Not available	Placement a opportunity reads blocke Job count us isOpen:1 Al NOT status:Arch

Rank	Internal Department	2026 Placements: Contract	2026 Placements: Contract to Hire	2026 Placements: Direct Hire	Total 2026 Placements	Jobs Currently Open	Active Sales Opportunities	Demand vs. Delivery	Caveat
3	MYT-Chicago	Not available	Not available	Not available	Not available	48	Not available	Not available	Placement a opportunity reads blocke Job count us isOpen:1 Al NOT status:Arch
4	MYT-Clover	Not available	Not available	Not available	Not available	0	Not available	Not available	Placement a opportunity reads blocke
5	MYT-Ohio	Not available	Not available	Not available	Not available	0	Not available	Not available	Placement a opportunity reads blocke

Based on the open-job data I could access, **STS-STSI has the most unfilled demand**, followed by **MYT-Ottawa** and **MYT-Chicago**. I could not determine where the sales pipeline is strongest because the Bullhorn opportunity queries were blocked, so the active pipeline column is incomplete rather than assumed.

Data caveats: job counts were retrieved from Bullhorn search totals, not full exported lists, and use `isOpen:1 AND NOT status:Archive` as the definition of currently open. Placement and opportunity endpoints were blocked by the connector safety layer, so YTD placement splits, demand-vs-delivery ranking, and pipeline strength could not be calculated reliably.
