

build me a 2026 year-to-date staffing scorecard broken down by Internal Department (e.g. MYT-Ottawa, STS-STSI, MYT-Chicago, MYT-Clover, MYT-Ohio).
For each department, show:

- 1. Placements made so far in 2026, split by employment type
(Contract, Contract to Hire, Direct Hire).
- 2. The number of jobs currently open.
- 3. Active sales opportunities in the pipeline
(anything not Closed-Won, Closed-Lost, or Converted).

Show more ▾

I'll pull the needed Bullhorn fields first, then query 2026 placements, open jobs, and active opportunities by department. I'll rank the final table by demand vs. delivery and flag any capped result sets.

I found the key Bullhorn mappings: Placement "Internal Department" is `correlatedCustomText1`, Opportunity "Internal Department" is `customText1`, and Opportunity status will drive the active pipeline filter.

The placement pull returned 123 records for Jan. 1 through Jun. 20, 2026, under the 500-record cap. I'm separating true delivery from canceled/archive entries so the scorecard reflects actual placements made.

2026 YTD Staffing Scorecard by Internal Department

Rank	Internal Department	Contract Placements	Contract-to-Hire Placements	Direct Hire Placements	Total Placements	Open Jobs	Active Sales Pipeline	Demand vs. Delivery
1	MYT-Ohio	0	0	0	0	5	1	N/A placem
2	STS-STSI	16	20	1	37	242	18	

Rank	Internal Department	Contract Placements	Contract-to-Hire Placements	Direct Hire Placements	Total Placements	Open Jobs	Active Sales Pipeline	Demand vs. Delivery
3	MYT-Ottawa	33	1	6	40	104	0	
4	MYT-Chicago	12	5	3	20	48	1	
5	MYT-Clover	9	0	0	9	13	2	

STS-STSI has the largest measurable unfilled demand, with 242 open jobs against 37 2026 placements, producing a 6.54 demand-to-delivery ratio. The sales pipeline is also strongest in STS-STSI, with 18 active opportunities, well ahead of the other departments. MYT-Ohio is flagged separately because it has open jobs but no 2026 placements, so its demand-to-delivery ratio cannot be calculated cleanly.

Data caveats: placement counts use 2026 placement records from Jan. 1 through Jun. 20, 2026 and exclude Canceled and Archive statuses. The placement pull returned 123 records under the 500-record cap, so it was not capped. Open job counts came from department-filtered Bullhorn search totals; the broad open-jobs result set was capped at 100 records out of 412, so department totals were used instead of the capped list.
